

Clinical Trials Matching System

Leveraging cancer registry data to improve patient accrual rates.

Today's greater emphasis on early acquisition of cancer data opens up opportunities to utilize cancer registry data early on in patient care. At C/NET Solutions we have developed the capacity in our CNE_xT software to search the cancer registry database for potential matches to clinical trials. Advantages of our Clinical Trials Matching System to your health care system are:

- Improved timeliness in clinical trial accruals through electronic screening of cases
- Reduction in staff hours spent manually reviewing records for potential cases
- Greater return on dollars invested in case accrual and value added to the cancer registry

Contact us for a demo of this and other CNE_xT features and to see the benefits of making C/NET Solutions your cancer registry software provider.
