

Patient Survivorship Interface:

Expanding the cancer registrar's role in patient care.

At C/NET Solutions, we believe in cancer registries and their impact on the lives of cancer patients. Our new patient survivorship interface is a result of that belief. We developed this CNE_xT feature with input from cancer registrars and survivorship planning coordinators to assure the best customer experience for both.

Our customer-designed interface includes the following:

- Single or batch case processing
- Easy selection of patients scheduled for survivorship planning
- Date stamping for compliance reporting

Best of all, the patient survivorship interface is included in the regular CNE_xT license fee along with our many other software features.

CNE_xT Your Total Registry Solution
